School breakfast provides students with a healthy start to the school day. School breakfast is healthier than most people realize, and can benefit kids, classrooms and communities.

**HOW HEALTHY IS SCHOOL BREAKFAST?**

Even though food items provided to students at school sometimes look the same as breakfast foods found in grocery stores, convenience stores or fast food restaurants, their nutritional profile is very different. Schools participating in the School Breakfast Program (SBP) must adhere to nutrition guidelines supported by science and provided by United States Department of Agriculture (USDA).

For example, General Mills’ Cinnamon Toast Crunch Cereal Bar can be found in both grocery stores and schools. The cereal bar in schools is served as part of a reimbursable school breakfast, which must meet USDA nutrition guidelines; whereas, the cereal bar sold in grocery stores or at the corner market does not have to meet any nutritional requirements.

Here are some facts about school breakfast:

- Breakfast grains at school are whole grain rich, low in sugar and packed with vitamins and minerals.
- Juices are 100% fruit/vegetables.
- Calorie levels have an age appropriate minimum and maximum.
- Saturated fat is less than 10% of total calories.
- Breakfast is low in sodium.

HOW ARE BREAKFAST MENUS PLANNED?

Menus are planned by school nutrition professionals. Breakfast items are student-tested regularly to ensure that the menu contains items that the students like and will consume. If unpopular items are served, students won’t select them, which means students lose out on the benefits of breakfast. Therefore it’s in the best interest of schools to offer students options that they will enjoy.

DON’T FORGET ABOUT THE ADDED BENEFITS OF BREAKFAST

School Breakfast is much more than a way to fill an empty belly. It helps kids focus, contributes to higher attendance rates, and kids who eat school breakfast tend to be healthier overall.

Students who eat school breakfast attend, on average, 1.5 more days of school per year.\(^1\) Students who eat school breakfast score, on average, 17.5\% higher on standardized math scores.\(^2\) Kids who eat school breakfast are more likely to consume milk and fruit as part of their breakfast.\(^3\)

Children in low-income families who eat school breakfast have a better overall diet than children who miss breakfast or get breakfast somewhere else.\(^4\) Children who participate in the school breakfast program are less likely to be obese, overweight, and are more likely to have a lower body mass index (BMI).\(^5,6,7,8\)

YOUR VOICE IS IMPORTANT!

If you would like to learn more about breakfast in your school and/or share your thoughts and ideas, please contact your School Nutrition Director. Through collaboration and creativity, positive partnerships are formed. For additional resources and information on School Breakfast, visit the Center for Best Practices.
